

Conservation Activity Plan

Integrated Pest Management, Herbicide Resistance Weeds

December 2011

Integrated Pest Management, Herbicide Resistance Weeds

An integrated pest management, herbicide resistance weeds conservation activity plan is a site-specific, ecosystem-based strategy to help a landowner suppress herbicide resistant weeds on cropland while protecting soil, water, air, and plant quality.

NRCS Technical Service Providers (TSPs) prepare these plans using inputs such as:

- Environmental risk assessments
- Monitoring
- Recordkeeping

Conservation practices recommended in these plans can include:

- Conservation cover
- Irrigation water management
- Mulching
- Residue management
- Prescribed grazing
- Judicious herbicide use
